

HTML Entities

Coding and Web Development | Lecture 07 | By - Nishant Sir | Summary Notes

Kya hai HTML Entity?

HTML mein kuch characters **reserved** hote hain — jaise `<`, `>`, `&` — kyunki inka use HTML tags likhne ke liye already hota hai. Agar hum inhe seedha page ke content mein likh dein, to browser confuse ho sakta hai ki ye normal text hai ya HTML code.

Isi problem ko solve karne ke liye **HTML Entities (Special Character Codes)** use kiye jaate hain — ye ek special code hota hai jo browser ko batata hai ki iska matlab ek particular character dikhana hai, na ki use HTML tag ki tarah treat karna hai.

Entity ka General Format

```
&entity_name;  
&#entity_number;
```

- Entity hamesha **&** (ampersand) se start hoti hai
- Entity hamesha **;** (semicolon) se end hoti hai
- Naam se (jaise `<`) ya number se (jaise `<`) — dono tarah likha ja sakta hai

Entities kyun zaroori hain?

- Reserved characters (`<`, `>`, `&`) ko **plain text** ki tarah show karne ke liye
- Characters jo keyboard se seedhe type nahi ho paate (`©`, `™`, `■`, etc.)
- Extra **spacing** control karne ke liye (jaise ` `)
- HTML code ko example ke roop mein page par dikhane ke liye (jaise is document mein)

Reserved Characters

Character	Entity Name	Entity Number	Meaning
<code><</code>	<code>&lt;</code>	<code>&#60;</code>	Less than
<code>></code>	<code>&gt;</code>	<code>&#62;</code>	Greater than
<code>&</code>	<code>&amp;</code>	<code>&#38;</code>	Ampersand
<code>"</code>	<code>&quot;</code>	<code>&#34;</code>	Double quote
<code>'</code>	<code>&apos;</code>	<code>&#39;</code>	Single quote

Spacing & Common Symbols

Character/Use	Entity Name	Entity Number
Non-breaking space	<code>&nbsp;</code>	<code>&#160;</code>
Copyright (c)	<code>&copy;</code>	<code>&#169;</code>

Registered (R)	®	®
Trademark (TM)	™	™
Rupee sign	₹	₹
Degree sign	°	°
Multiply (x)	×	×
Divide	÷	÷

Example

Agar hum page par likhna chahein: **<p> this is paragraph tag </p>** (as plain visible text, HTML tag ki tarah nahi), to code mein likhenge:

```
&lt;p&gt; this is paragraph tag &lt;/p&gt;
```

Browser par ye output dikhega:

```
<p> this is paragraph tag </p>
```

Yaani browser ise HTML tag ki tarah render nahi karega, balki text ki tarah dikhayega.
