

CSS Notes - Lecture 11

Coding and Web Development · By Nishant Sir · Summary Notes

1. Background Gradient

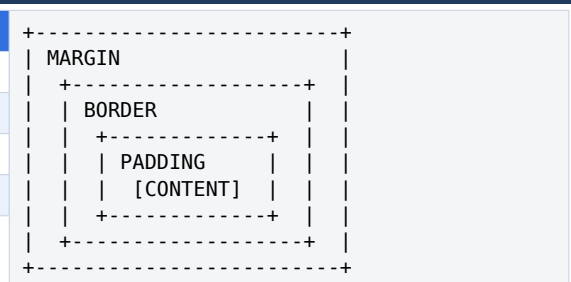

Ek color dheere-dheere doosre color mein badalta hai (e.g. **Red** → **Yellow**). Property: **background** / **background-image**. Pehle direction, phir colors; 2 se zyada colors bhi chalte hain.

Type	Kaise failta hai	Syntax	Example
Linear	Seedhi line mein (left→right, top→bottom, diagonal)	<code>linear-gradient(direction, c1, c2)</code>	<code>linear-gradient(to right, red, yellow)</code>
Radial	Center se bahar, circle/ellipse jaisa	<code>radial-gradient(shape at pos, c1, c2)</code>	<code>radial-gradient(circle, red, yellow)</code>
Conic	Center ke around ghoomte hue (color wheel)	<code>conic-gradient(from angle, c1, c2)</code>	<code>conic-gradient(red, yellow, red)</code>

Class examples ("Thread Co" boxes): pehla **to right** (horizontal), doosra **to top right** (diagonal), dono red → blue. Directions: **to right** / **left** / **top** / **bottom** / **top right**. *Radial aur conic extra reference ke liye hain; class mein linear dikhaya gaya.*

2. Box Model

Layer	Kaam
Content	Text/image/media; size width + height se.
Padding	Content aur border ke beech transparent jagah.
Border	Content + padding ke around visible line.
Margin	Sabse bahar transparent jagah; doosre elements se doori.

Ghar example: house = content, khali space = padding, deewar = border, padosi se doori = margin.

Order: Content → Padding → Border → Margin

3. Border

Tarika	Code	Shorthand order	Matlab
Long	<code>border-width: 1px;</code> <code>border-style: solid;</code> <code>border-color: red;</code>	1. 2px	width
		2. solid	style (solid, dashed, dotted...)
Shorthand	<code>border: 2px solid navy;</code>	3. navy	color

4. Total Width ki Calculation

Formula: **Total width = content + 2×padding + 2×border + 2×margin**

Example	Values	Calculation	Total
1 (Devtools)	content 934, padding 40, border 10, margin 40	<code>934+40+10+40+40+10+40</code>	1114 (board par 1181 galat tha, cross kiya)
2	width 1000, padding 40, border 10, margin 40	<code>1000+80+20+80</code>	1180 (1000px dene par bhi 1180px jagah)

5. box-sizing

Point	content-box (default)	border-box
width mein kya count hota hai	Sirf content	Content + padding + border
Padding/border badhane par	Box bada ho jaata hai	Content sikud jaata hai, box wahi rehta hai
Predict karna	Mushkil	Aasaan

Example (diagram): width 1000, padding 230, border 10, **border-box** → content =

$$1000 - (230+230) - (10+10) = 520$$

Margin box ke bahar hota hai, isliye count nahi hota.

Best practice:

```
* {
  box-sizing: border-box;
}
```

Note: gradient code aur border-box ka 520 calculation PDF ke diagrams/board numbers se samajhkar likha hai; class mein alag bataya ho to check kar lena.
